- * Chronic digestive problems
- * Chronic headaches
- * Chronic skin conditions
- * Stiff, aching joints and muscles
- * Susceptible to infections
- * Respiratory difficulties (asthma, smoking)
- * Allergies
- * Low energy and fatigue
- * Depression and moodiness
- * Poor quality sleep and insomnia
- * Have impaired liver function due to: alcohol, poor eating habits, high stress, chemical exposure in the workplace, and hepatitis.

Why Detox?

External toxins from your environment (i.e., chemicals are found in your foods, water and air, pesticides, heavy metals and other pollutants) bombard your body on a daily basis leading to many of the chronic illnesses we see today.

Toxins are then eliminated through perspiration, bowel elimination, urination and respiration. However, if the body is taking in more toxins than it can safely eliminate, a state of chronic toxicity may occur. Most chronic illnesses can be attributed to the presence of unwanted substances in the body or the lack of needed substances in the body.

The process of eliminating unwanted substances from the body at the cellular level addresses and corrects this imbalance. However, for effective detoxification it is also essential to provide the body with the necessary dietary substances and have a lifestyle containing all of the components of health. This is the ideal way for the body to perform this important and natural function.

About Detoxing Foot Baths

Also known as an Ionic Body Cleanse - a gentle and effective way to detoxify, cleanse and balance the body by drawing the impurities out of the body through the feet. As your feet soak in the ionic foot bath, your body will undergo an amazing cleanse of years worth of stored toxins.

How is this possible?

The Ionic Cleanse treatment works by osmosis. The ionater which is placed in the foot bath releases ions through the water and into your body.

Your cells are energized by the ions and are finally able to release the toxins, oils, acids, fats, heavy metals, cellular debris and waste that have accumulated over your lifetime.

It is an amazing process to watch, as the presence of these cleansed toxins and waste are deposited back into the water around your feet in a murky display of residue.

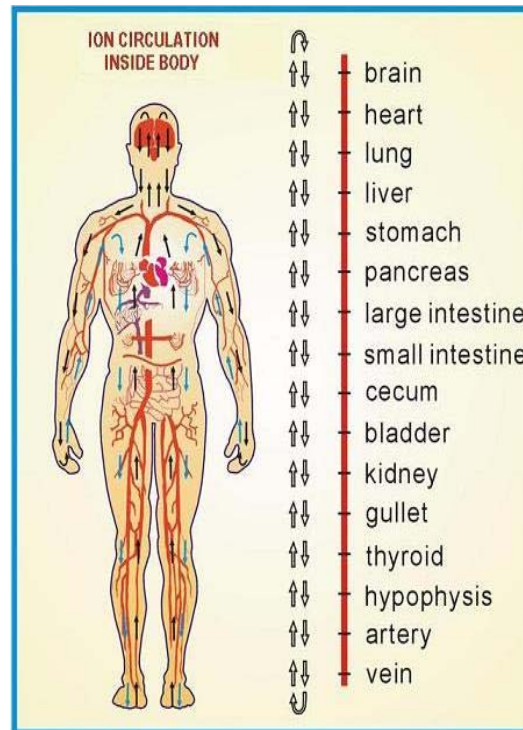

Ionic body cleanse is an innovative technique for facilitating detox and drainage while simultaneously fostering healthy pH changes in the body.

In addition, the body can also eliminate parasites, pinworms, and various colored mucous; even drawing massive amounts of nicotine from the tissue and joints of people that quit smoking several years ago.

As your body is detoxified, cleansed, balanced and able to function at its fullest capacity once again, you will experience a sense of relief throughout the body, increased energy, and improved mental clarity. www.detoxfootbaths.com

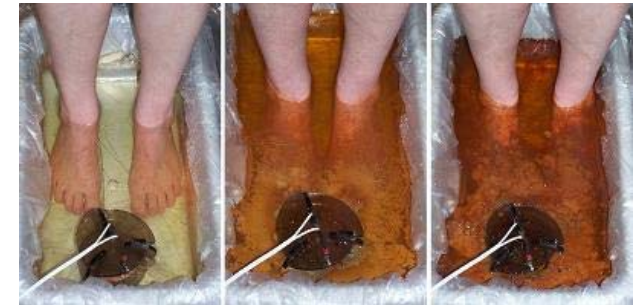

Detoxification is a term that is used to describe the removal of toxins and impure substances such as heavy metals, yeast, and blood clots. Ionizing foot baths also detox of the joints, kidney, bladder, urinary tract, liver, female/prostate area, and cellular debris.

The physiology of circulation.

Detox Chart
